

Invisideck® Hidden Scrail® Fastener System

[in](#) *Builder News Staff* | December 13th, 2010

FASCO AMERICA :: Fasco America's Invisideck Hidden SCRAIL Fastener System lets deck builders create flawlessly smooth deck board surfaces with less time and labor. The system is made up of three components, including Invisideck SCRAIL Fasteners, which feature the proprietary FasCoat® finish; Invisideck Tool, an installation gun that drives the SCRAIL into each joist (like a nail), but removes like a traditional

screw, and Invisideck I-CLP Clips, which are ideal for pre-grooved decking or solid edge composite and hardwood boards (grooved with the new Fasco America groove cutter) from 5/4 to 2 inches thick. We chose this because it lets builders spend less time on the jobsite while offering strength and durability in their decking projects.
